

# CHOOSING INSERT BLOCKS

The insert blocks are made in halves. Two are required for each cable. Each block is 60 mm long. Our range of blocks accommodates cables between 4 and 100 mm in diameter. It is important that the insert block is the right size with respect to the cable to ensure a proper seal. Measure the cable diameters carefully and choose insert blocks according to the sizing chart below.

Spare area in the frame fills out with spare blocks. They are made in the same sizes as the insert blocks and they bear the designation 15/0, 20/0, 30/0 etc. Spare blocks are also made in sizes 5/0 (available in strips of 24 pcs, called 24x5/0) and 10/0 (available in strips of 12 pcs, called 12x10/0). Spare blocks also provide spare capacity for additional cables and pipes.

CABLE DIAM.	A				B	CABLE DIAM.	A			B	CABLE DIAM.	A		B
	15	20	30	40			40	60	90			90	120
